

Cosmology from Non Gaussian Map-Based Statistics with DES Y3 Data

Marco Gatti
(UPenn)

Cosmology from home, July 4th-15th 2022

(Weak) Gravitational Lensing

Due to the **Large Scale Structure** of the Universe, the path followed by the light emitted by distant galaxies will appear distorted

Gravitational lensing allows to probe the matter distribution (mostly dark)

(projected) WL mass map (or convergence)

Not observable directly

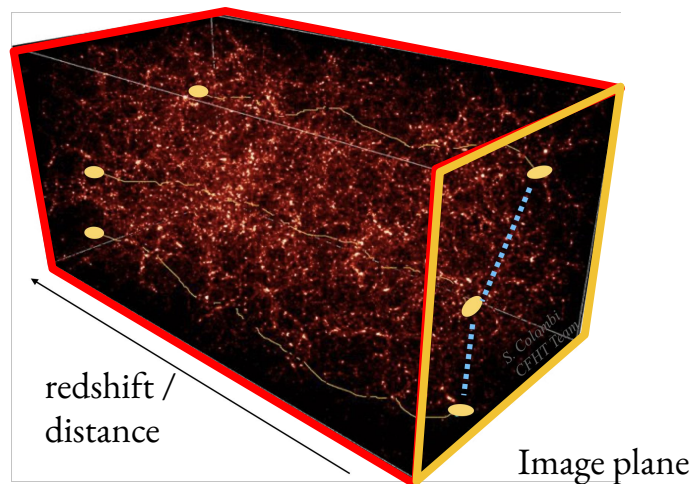

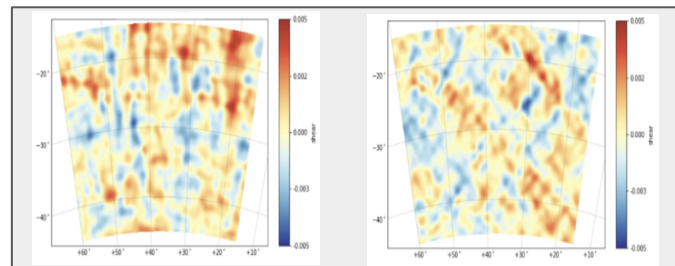

Mass Map reconstruction
(e.g., Kaiser-Squires)

observable!

Using measured galaxies ellipticity, we can estimate the shear field (2 components)

2D weak lensing mass maps & high order statistics

(WL mass map)

convergence
smoothing 10 arcmin

Map of the mass distribution of the Universe
(integrated along the line-of-sight).

2D weak lensing mass maps & high order statistics

(WL mass map)

convergence
smoothing 10 arcmin

Map of the mass distribution of the Universe
(integrated along the line-of-sight).

The convergence field **is not Gaussian**; high order stats can probe additional cosmological information

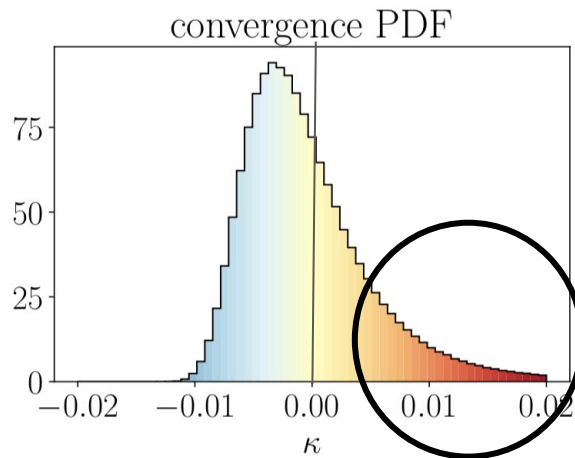

2D weak lensing mass maps & high order statistics

(WL mass map)

convergence
smoothing 10 arcmin

Map of the mass distribution of the Universe
(integrated along the line-of-sight).

The convergence field **is not Gaussian**; high order stats can probe additional cosmological information

DES Y3 moments analysis, Gatti+21, [2110.10141]

2D weak lensing mass maps & high order statistics

(WL mass map)

convergence
smoothing 10 arcmin

Map of the mass distribution of the Universe
(integrated along the line-of-sight).

The convergence field **is not Gaussian**; high order stats can probe additional cosmological information

DES Y3 moments analysis, Gatti+21, [2110.10141]
DES Y3 peaks analysis, Zuercher+22, [2110.10135]
DES Y3 peaks analysis (Jeffrey+ in prep.)

2D weak lensing mass maps & high order statistics

(WL mass map)

convergence
smoothing 10 arcmin

Map of the mass distribution of the Universe
(integrated along the line-of-sight).

The convergence field **is not Gaussian**; high order stats can probe additional cosmological information

- Complementary & additional information wrt 2pt statistics
- Different dependence on systematics

The Dark Energy Survey

- Imaging galaxy survey.
- ~5000 sq. deg. after 6 years (2013-2019)
- Shapes, photometric redshifts and positions for 300 million galaxies.

Red : Science verification data

Green: DES Y1

Blue: DES Y3

- The DES Y3 data spans the full footprint (4134 sq deg). 100 million galaxy shapes, 10 million galaxy positions
- In 2021 we released the so called ‘**3x2pt**’ DES Y3 cosmological analysis which featured the analysis of 3 different 2pt correlation functions (shear-shear, galaxy-shear, galaxy-galaxy). In January 2022, we released our DES Y3 catalogs.
-

Dark Energy Survey Y3 Mass Map

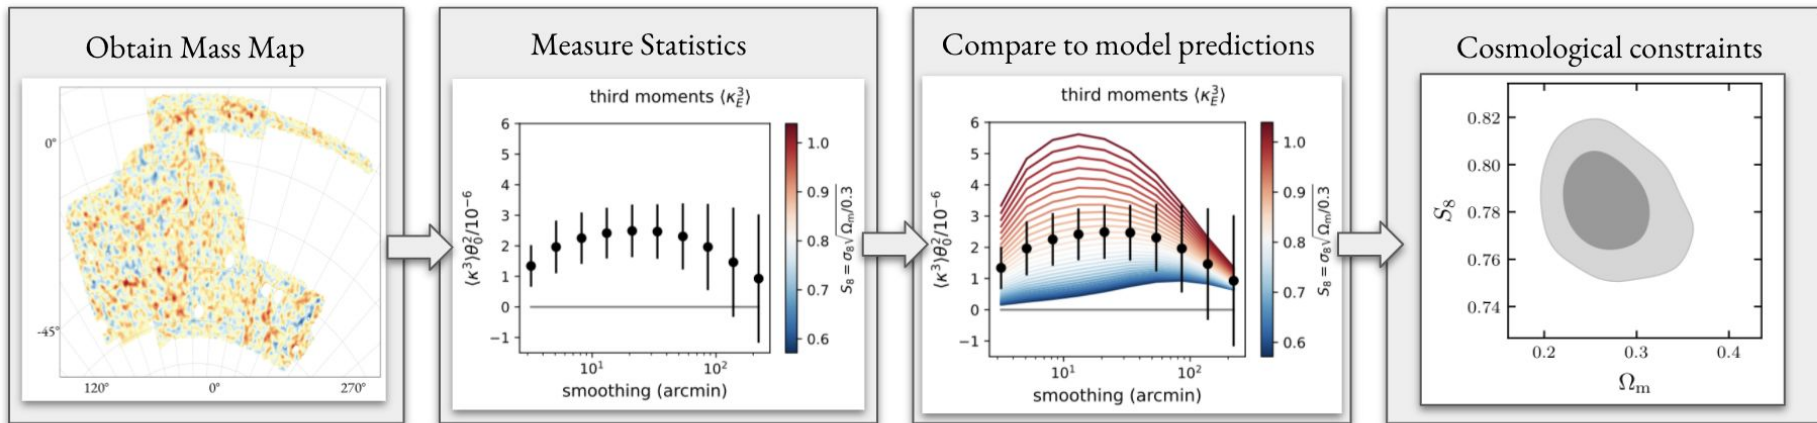

5000 sq. degrees, 100 million galaxy shapes

The convergence field **is not Gaussian**; high order stats can probe additional cosmological information

From maps to cosmology

Analytical modelling

☹️ complex to develop; not always feasible

😊 not computationally expensive

adopted in the moments analysis [Gatti+21]

Simulation-based forward modelling

😊 possible for any statistic

☹️ computationally expensive

adopted in the DES peaks analyses
[Zuercher+21, Jeffrey+22 in prep.]

Analytical predictions: complex to develop, but computationally cheap to evaluate.

$$\langle \delta_{\theta_0, \text{lin}}^3 \rangle(\tau) = \frac{6}{(2\pi)^3} \int d^2k_1 d^2k_2 W(\mathbf{k}_1, \theta_0) W(\mathbf{k}_2, \theta_0) W(\mathbf{k}_1 + \mathbf{k}_2, \theta_0) \\ \times P_{\text{lin}}(\mathbf{k}_1, \tau), P_{\text{lin}}(\mathbf{k}_2, \tau) F_2(\mathbf{k}_1, \mathbf{k}_2, \tau), \quad (\text{A11})$$

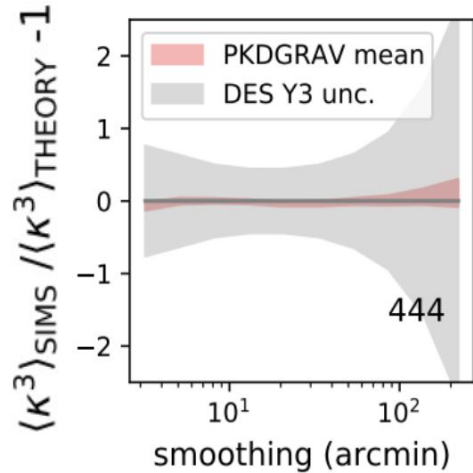

The kernels F_2 , predicted by PT, can be ‘extended’. Two common extensions are the SC01 and GM12, based on N-body simulations

$$F_2(\mathbf{k}_1, \mathbf{k}_2, \tau) = \frac{1}{2} \left[\left(1 + \frac{k_1}{k_2} \cos\phi\right) + \left(1 + \frac{k_2}{k_1} \cos\phi\right) \right] + [1 - \mu(\tau)](\cos^2\phi - 1),$$

$$F_2(\mathbf{k}_1, \mathbf{k}_2, \tau) = \frac{1}{2} b_1 b_2 \left[\left(1 + \frac{k_1}{k_2} \cos\phi\right) + \left(1 + \frac{k_2}{k_1} \cos\phi\right) \right] \\ + [1 - \mu(\tau)] c_1 c_2 (\cos^2\phi - 1) + [a_1 a_2 \mu(\tau) - b_1 b_2 + [1 - \mu(\tau)] c_1 c_2].$$

Validation & systematics control

Theoretical predictions vs simulations

moments methods paper: 1911.05568

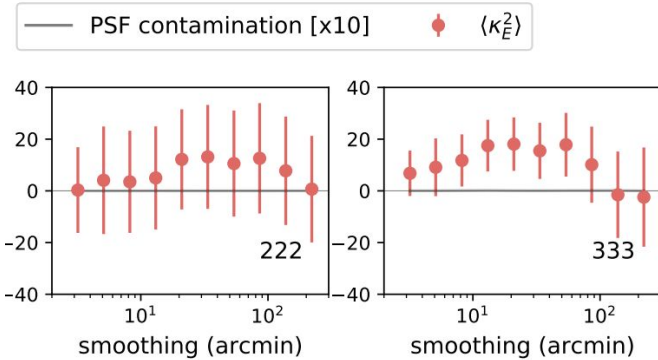

Cosmological analysis:

- Λ CDM, 5 cosmological parameters
- Intrinsic Alignment (NLA)
- Calibration systematics (redshift & shear)

PSF systematics

Second moments

Third moments

Cosmology from DES Y3 2nd+3rd moments

3rd moments probe additional non Gaussian
information & break σ_8 - Ω_m degeneracy

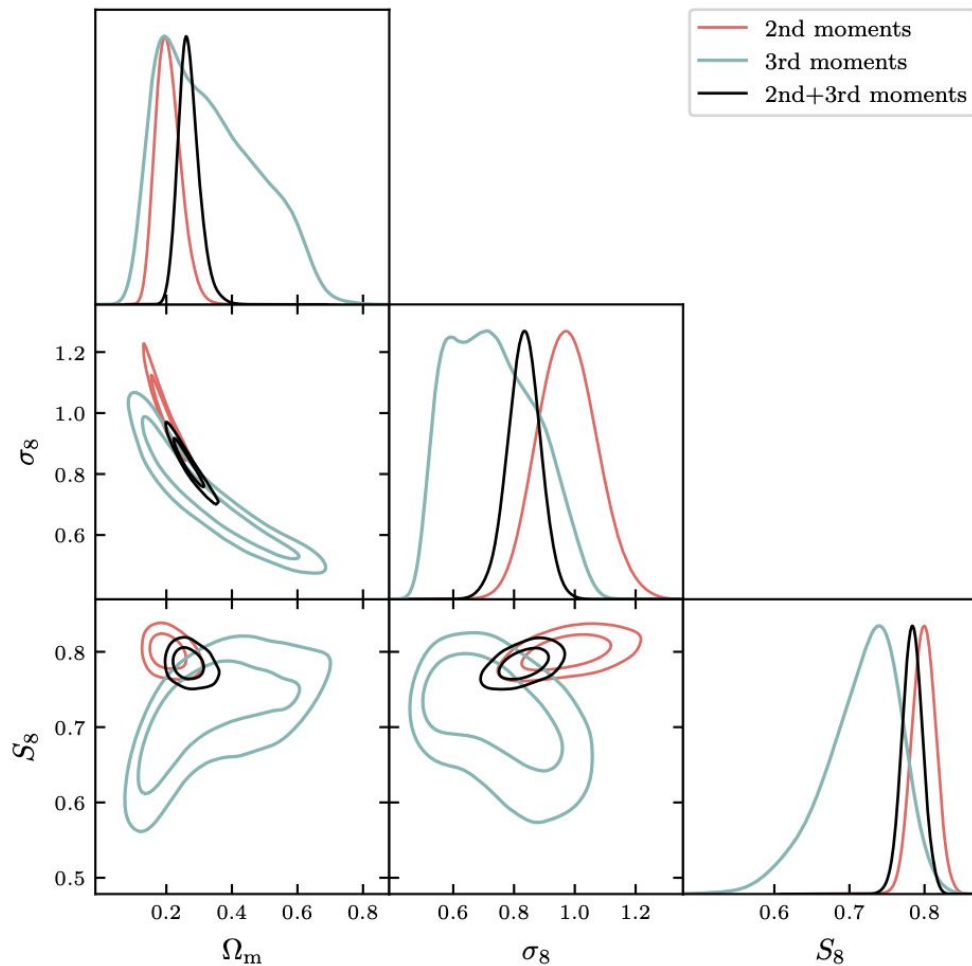

3rd+2nd moments improve constraints by 30% over
2nd moments only

$$\Omega_m = 0.27 \pm 0.03$$

$$\sigma_8 = 0.83 \pm 0.05$$

$$S_8 = 0.784 \pm 0.013$$

**Most stringent constraints on S_8 from a WL
analysis to date!**

Cosmology from DES Y3 Power Spectra+ Peaks

Peaks probe additional non Gaussian information &
break σ_8 - Ω_m degeneracy

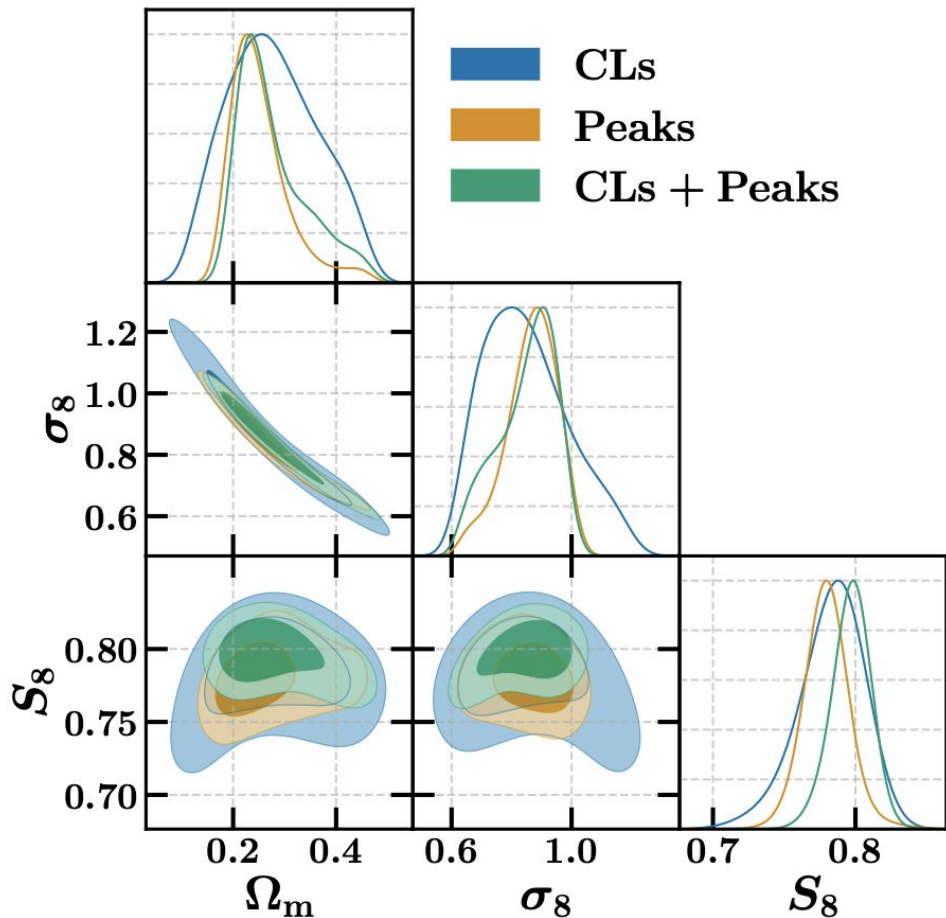

Peaks+Power Spectra(CL) improve constraints by
40% over Power Spectra only

$$\Omega_m = 0.276^{+0.034}_{-0.086}$$

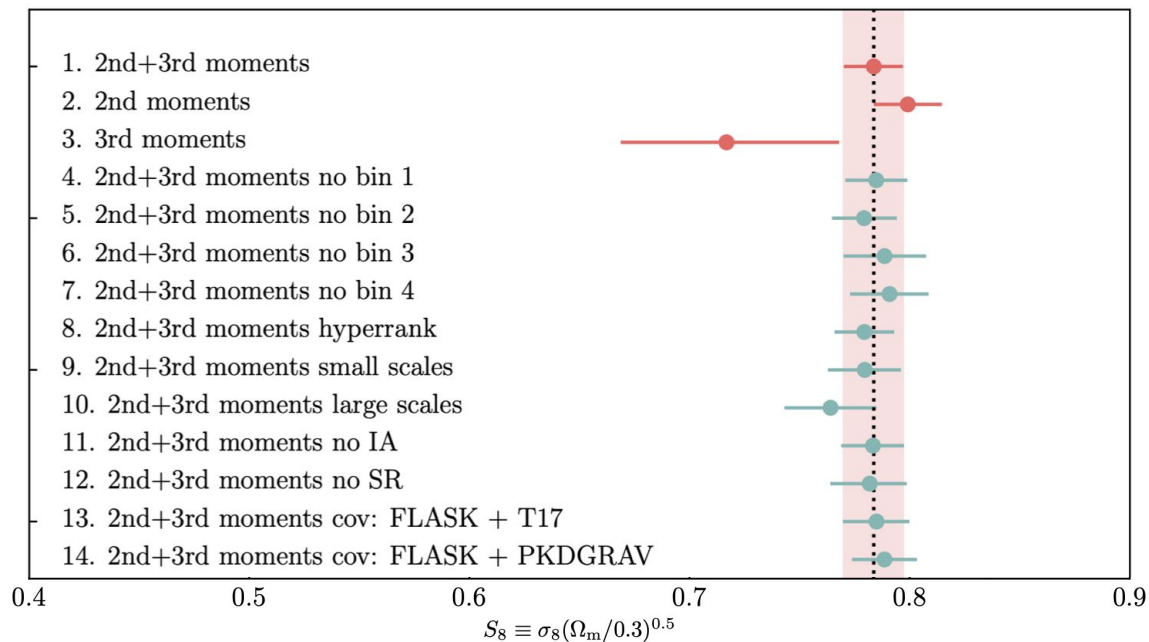

$$\sigma_8 = 0.850^{+0.13}_{-0.068}$$

$$S_8 = 0.797^{+0.015}_{-0.013}$$

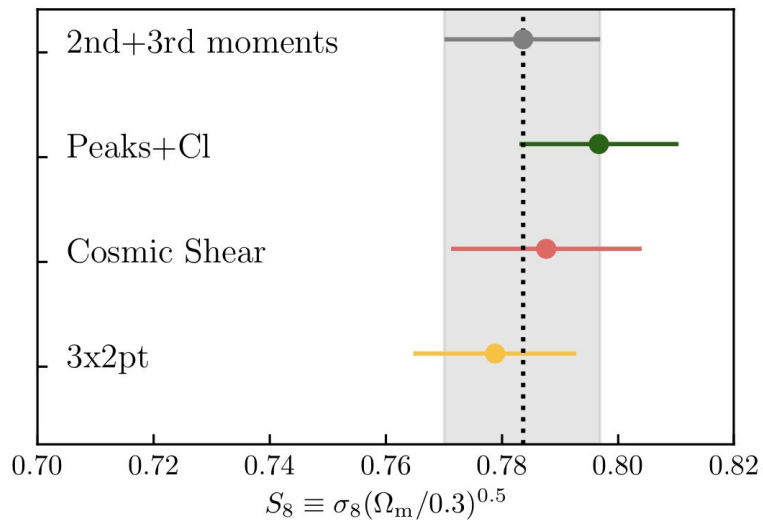

Similar constraining power on S_8 of the moments
analysis

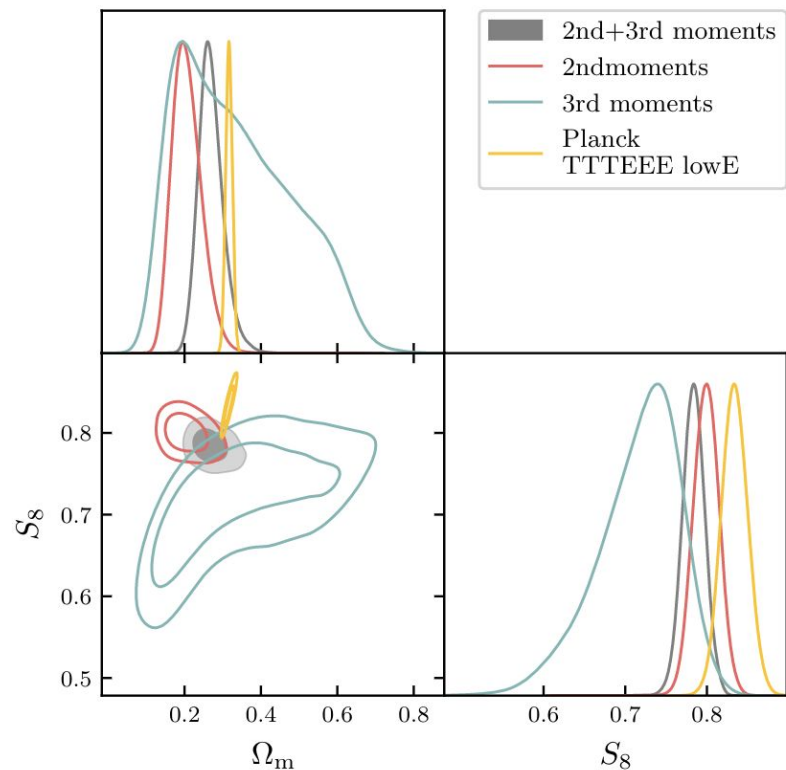

Analysis robust against different analysis choices

Consistency with other DES analyses

Consistency with Planck

2nd moments ~ 2.7 sigma tension

3rd moments ~ 2.8 sigma tension

2nd+3rd moments ~ 2.2 sigma tension

Summary

- We presented cosmological results from 2 independent analyses using high order statistics and DES Y3 data: the moments and peaks analyses.
- Due to the additional non Gaussian information probed, these analyses provide the tightest constraints on S_8 from any WL analysis to date, improving over ‘standard’ 2pt correlation analyses, and provide an independent consistency check to the fiducial DES 3x2 analysis
- Coming soon:
 - >> LFI peaks / Deep Learning / phase wavelet moments cosmology with WL DES Y3 data
 - >> Joint non Gaussian statistics analysis of weak lensing & galaxies
 - >> DES Y6 (LSST, Euclid,...)
